

# THERASHIMS for use in THERAFLEX Saddle Pad

## Shoulder Shim Patterns: Original Larger Size compared with New Smaller Size

THERAPEUTIC FELT SHIMS are available in THICK (black web strap) and THIN (red web strap) styles.

Though the smaller size is what will be carried in stock in the future, your original shims are still suitable for use in many cases. Use this pattern as a shaping/sizing guide if you wish to cut down your larger shims.

Our recent research has indicated that the smaller size is versatile for all horses, and especially important for broad-backed and round shouldered horses, because you can position them lower in the aircell pockets. This keeps bulk away from the muscles close to the topline, where dry spots often occur when there is too much pressure there. (See our "Shim & Balance" Guide)

Each set of shims is comprised of 2 paddle-shaped shims, connected by a LONGER WEB STRAP than the original larger shims. This allows you to place them lower in the Theraflex Saddle Pad's air cell pad pocket for certain horse's back shapes. USE SHARP SCISSORS if you wish to cut down the size of your larger shims. We also suggest cutting the connecting strap, so you can tuck the shims lower in the pad pocket without putting pressure on horse's wither or topline area
